Award:  
Pure Tension Pavilion  
Synthesis Design + Architecture

To showcase its high-tech V60 model, Volvo Car Italia wanted a exhibition pavilion that was iconic, portable, easy to assemble, and suggestive of the vehicle’s three modes of propulsion: diesel, electric, and hybrid. Synthesis Design + Architecture (SDA), in Los Angeles, won the international design competition by tackling on two requirements of its own: The pavilion had to charge the car’s battery and fit inside the back of the V60 for storage. In short, it would become a practical, essential accessory that embodies the car’s sustainability message.

Inspired by the lightweight, tensile membrane roofs of Frei Otto, SDA founder and principal Alvin Huang, aia, and his team explored potential configurations for the pavilion using Grasshopper plug-in Kangaroo as well as through physical models built with wire and nylon stocking. The team added visual interest to a conventional tent form with the pavilion’s three apices, a nod to the V60’s three modes of operating. To add stability and lift to ensure
clearance for bystanders, the team introduced two catenoid tunnels in the membrane.

SDA had four months to turn its design concept into reality. It collaborated with the Los Angeles office of BuroHappold Engineering and Elgin, Ill.–based Fabric Images to develop a frame of 24 pre-bent 3-inch-diameter aluminum pipes that slip-fit together and through neoprene sleeves in the pavilion membranes much like tent poles. The team also simplified the frame’s geometry into five arcs that create what Huang says is a hybrid between a hyperbolic paraboloid and a minimal surface.

Next came enabling the pavilion to harvest solar power. The firm created a heat map to determine which thin photovoltaic–panel layout would capture the most solar energy, using Rome as the test site because the pavilion would debut in Italy. They then hand-stitched the two curvilinear fabric membranes from a series of flat pieces, and stitched the 352 flexible solar panels to the mesh, tucking the wires into fabric channels.

“It was a highly digital design process with a highly manual assembly process,” Huang says.

The prototype fits into two 65-inch-by-15-inch-square cases and can be assembled and dismantled by two people in less than an hour. After piecing the frame together, the users would zip the neoprene sleeves around it, and then zip together two vinyl-encapsulated, polyester-mesh membranes to create the final structure. The aluminum frame pushes outward while the tensioned skin pulls inward, holding the pavilion’s form in equilibrium.

Though juror Steven Rainville was initially lukewarm to the project’s marketing focus, he respected its multifunctionality. Overall, the design and fabrication process captivated the jury. “The pavilion has a magical lightness,” juror Marc Fornes said. SDA is currently refining the pavilion’s design, in collaboration with Volvo, to produce a limited commercial edition that is smaller, easier to assemble, and more efficient in charging the car. —C.H.
Judges

French architect Marc Fornes is the principal and founder of The Very Many in New York, as well as a self-described connoisseur of computer science. His work focuses on investigating design through codes and computational protocols. He received a master of architecture and urbanism from the Architectural Association School of Architecture in London.

Joyce Hwang, AIA, is an associate professor of architecture at the University at Buffalo, the State University of New York, and the director of Arts of the Prairie, a research and practice firm in Buffalo, N.Y., that confronts contemporary ecological conditions through creative means. She received an M.Arch. from Princeton University and a B.Arch. from Cornell University.

Steven Rainville, AIA, is a principal at Seattle-based Olson Kundig Architects, which he joined in 1996. He is also the director of the firm’s R&D department as well as the founder of Mind Mine, the firm’s forum for crowd-sourced ideas that break down boundaries between industries. He received his B.Arch. from Washington State University.

Credits

Pulp Pavilion, page 104
Client: Coachella Valley Music and Arts Festival
Design Firm and Fabricator: Ball-Nogues Studio, Los Angeles - Gaston Nogues, Benjamin Ball, ASSOC. AIA (project leads/designers); Rafael Sampaio Rocha (project manager); Ricardo Guinn, John Guill, Fernando Marroquin, Rafael Sampaio Rocha, Forster Rudolph, Corie Saxman, Nicole Semenova, Ethan Schwartz (onsite project team); Andrew Fastman, AIA, Michael Anthony Fontana, Cory Hill, James Jones, Mora Nabi, Jacob Patapoff, Allison Porterfield (support);
Lighting Programming: F. Myles Sciutto
Structural Engineer: Nosz Engineering
Omar Garza
Funding: Commission from Goldenvoice
Size: 1,500 square feet

Pure Tension Pavilion, page 108
Client: Volvo Car Italia
Design Firm: Synthesis Design + Architecture, Los Angeles - Alvin Huang, AIA (principal); Filipa Valente, Cha-ching Yang, Behnaz Farahi, Yueming Zhou
Structural Engineer: BuroHappold Engineering
Electrical Engineer: Ascent Solar

Bar Raval, page 110
Client: Grant van Gameren, Mike Webster, and Robin Goodfellow
Consultant and Fabricator: Millworks
Landscape and Urbanism: Studio Dada, Los Angeles - Mark Linder, Carole Farley, Marc Velocci
Funding: Design and Construction Institute
Size: 1,500 square feet

Co-Robotics and Construction, page 112
Design Firm: Rust Belt Robotics Group, University at Buffalo, State University of New York (SUNY)

OSCR-1 and OSCR-2 Team: Ball State University - Mike Silver, Mahesh Daas, Josh Vermillion (faculty); Yevgen Monakhov, Jason Foley, Matthew Fullenkamp, ASSOC. AIA, William Zycz, Justin Krasei, Michael Bolatto, Tyler Cox, ASSOC. AIA, Glenn Cramer, ASSOC. AIA, Robert Cichocki, Antone Sgro, Derek Anger, Tania Prorok, Derek Newman, David Smith, Yao Xiao, Matthew Wolak, Thomas Friddle (students)
OSCR-3 Team: University at Buffalo, SUNY Team - Mike Silver, Karthik Dantu (faculty); Colin Jacobs, Tim Ruhl, Albis Del Barrio, David Heathon, Gary Chung, David Lin, Georine Pierre, Robert Miller, Johnny Lynch, Daniel Fiore, Dylan Burns, Jia Jian Feng You, Marc Velocci (students)

Queen Richmond Centre West, page 113
Client and Funding: Allied Properties REIT
Design Firm: Sweeney & Co Architects, Toronto
Structural Engineer: Stephenson Engineering
Fabricators: Cast Connex, Walters Group
Construction Management: Eastern Construction
Electrical Engineer and Lighting Designer: Mulvey & Banani International
Mechanical Engineer: The Mitchell Partnership
Special Thanks: Michael Emery, Hugh Clark, John Stephenson, Jeffrey Stephenson, Carlos de Oliveira, Frank DeCaria, Renato Tacconelli, Tim Verhey
Size: 302,000 square feet
